

Schwab Verkehrstechnik AG

EC-Certification of various types of railway buffers

Customer:

Schwab Verkehrstechnik AG
8200 Schaffhausen (Switzerland)

Project data:

- Various types of conventional and hydraulic buffers for freight wagons
- Delivery: continuous

Schwab Verkehrstechnik AG in Schaffhausen commissioned SCONRAIL with the assessment and the EC certification of various types of railway buffers in accordance with the Technical Specification of Interoperability relating to the subsystem "rolling stock - freight wagons" of the trans-European conventional rail system TSI CR WAGON. This examination was performed in accordance with Module B and Module D of the TSI.

SCONRAIL disposes of the respective technical experts and an efficient organisation in order to achieve a certification in a short time. The early involvement of the certification body by the customer contributed to the reduction of the cycle time to the minimum; time consuming iterations have been avoided.
